

Manage your business and contact data in one place by synchronising information directly from your accounts system.

OfficeSync works alongside your SuperOffice CRM application.

OfficeSync provides a seamless data synchronisation between SuperOffice and leading accounts packages.

Look in one system to find all the answers:

- No need to remember numerous passwords to access information.
- Reduce the number of licences required for your team to access information from various applications.
- Improve reporting capabilities with everything in one place.

The fully automated system simplifies the way you work:

- Eliminates the need to individually update information in multiple sources.
- All contact correspondence can be stored in one place, saving time and improving searching capabilities.

And with inbuilt flexible settings you can:

- Share information you need and hide the information not required.
- See at the touch of a button the credit limits and client details all in one place.
- Develop timely marketing campaigns by cross referencing with information on product stock levels and availability.

Real time accounting information combined with your CRM data at the touch of a button.

OfficeSync has three operation modes allowing highly configurable synchronising for both customers and suppliers ensuring you only need to maintain your information in one place.

MODE ONE : Direct Mode

Run directly from SuperOffice, the OfficeSync direct mode checks in your accounts package to see if the customer/supplier exists.

If an account code has not been specified against the SuperOffice company, or the account code doesn't exist in the accounts package OfficeSync provides the facility to create the account in the relevant ledger.

If the specified account is found OfficeSync will allow you to synchronise the information based on your customised field mappings. Mappings can be reversed or disabled for an individual synchronisation.

Direct Mode

● keeping your business in sync

MODE TWO: Unattended Mode

Designed to be run automatically using the Windows Task Scheduler the unattended mode loops through the companies in SuperOffice, for the company categories specified in the configuration, updating the relevant fields in both the SuperOffice company and the customer or supplier accounts in your accounts package with any data changes.

Logging ensures auditability. A test option is provided to display the full processing details.

MODE THREE : Management Mode

The OfficeSync management mode allows you to list customer/suppliers from SuperOffice not linked to your accounts package and vice versa.

For any missing company OfficeSync allows you to create the relevant entity quickly and easily. Once the entity and the link have been created the other OfficeSync modes will take over to ensure the data is up-to-date.

Configuration:

The OfficeSync configuration options allows you to define the categories for both customer & suppliers and to specify your field mappings, which are highly configurable:

- Bi-directional field mappings
- User-defined field mappings
- Constant value mappings
- Company and person mappings

OfficeSync is a low cost data application offered on a monthly lease basis per user with discounts for multi-application licences.
